

# IT Help Desk System - Requirements

The IT Help Desk & Ticketing Management System is a web application designed to help companies manage technical support requests.

Employees can submit IT problems, while support agents can manage, assign, and resolve tickets through a centralized dashboard.

## User roles

| User          | Description                             |
|---------------|-----------------------------------------|
| Employee      | Creates and follows support tickets     |
| IT Agent      | Handles and resolves technical problems |
| Administrator | Manages users, tickets, and reports     |

## Functional requirements by role

### Employee

- Create tickets
- View ticket status
- Add comments
- Upload attachments

### IT Agent

- View assigned tickets
- Update ticket status
- Add solutions

### Administrator

- Manage users
- Assign tickets
- View reports
